PROFESSIONAL SUMMARY

Computer Science and Engineering student (graduating 2027) with hands-on experience building secure, scalable backend services and full-stack applications using Java and REST APIs, with working knowledge of Python scripting. Familiar with Spring Boot microservices, AWS cloud-native development, Docker containerization and CI/CD workflows. Applies secure development practices such as input validation and transactional integrity, and is comfortable with vulnerability triage, automation scripting and production-style troubleshooting. Backed by 900+ algorithmic problems solved on HackerRank. Self-driven, detail-oriented and collaborative; preparing for the AWS Certified Developer – Associate exam.

TECHNICAL SKILLS

Programming & Scripting: Java (Core Java, OOP, Collections, Exception Handling), Python (scripting, automation), SQL, JavaScript (ES6+), Bash

Backend & Architecture: Spring Boot, Microservices, RESTful APIs, MVC Architecture, Scalable & Reliable Backend Design, Performance Tuning, Client-Server Communication

Cloud & DevOps: AWS (EC2, S3, Lambda, IAM, CloudWatch), Docker, Kubernetes (fundamentals), CI/CD Pipelines (Jenkins, GitHub Actions), Git, GitHub

Security & Compliance: Vulnerability Management (identify, triage, track, remediate), Secure Development Practices, OWASP Top 10 Awareness, Input Validation, IAM Least-Privilege Basics, Governance, Risk & Compliance (GRC) Awareness

Databases & Data: MySQL, Relational Schema Design, Normalization, Joins, Query Optimization, ACID Properties; exposure to Big Data & Distributed Systems concepts, Data Pipelines

Frontend: React.js, HTML5, CSS3

Tools & Practices: VS Code, Postman, Linux CLI, Monitoring & Logging, Unit Testing (JUnit), Agile Collaboration, Prompt Engineering

KEY PROJECTS

Vehicle Pre-Booking & Fleet Management System | *Java, REST APIs, MySQL, React.js*

- Designed and built a reliable backend booking platform with CRUD services, vehicle inventory tracking and reservation scheduling.
- Modeled a normalized MySQL schema for users, vehicle availability and time slots, ensuring overlap-free bookings and data integrity.
- Implemented server-side validation and transactional checks to prevent double-booking and reject malformed or unsafe input.
- Exposed REST endpoints for live availability checks and instant booking confirmation, with correct HTTP status handling.

Revenue Recovery Web Application (RecoverAI) | *Java, REST APIs, MySQL, React.js*

- Built a full-stack dashboard and backend services to track and process transaction recovery records at scale.
- Developed business rules and data validation to flag disputed records and auto-generate recovery steps, supporting audit and compliance-style workflows.
- Optimized MySQL queries and table design to improve dashboard performance while preserving transaction integrity.

Voice-Assisted Health Information Portal | *Web Speech API, REST APIs, Database Logging*

- Built a responsive interface supporting voice and text input in English and Tamil using the browser Web Speech API.
- Created backend REST endpoints to process search queries and return structured health reference content.
- Logged user queries to a database to monitor search frequency and system performance, supporting continuous improvement.

CERTIFICATIONS

- AWS Certified Developer – Associate (DVA-C02) – Preparing / Planned
- Applied Generative AI Specialization – Simplilearn (Prompt Engineering, AI-Assisted Workflows)

ACHIEVEMENTS & CODING PROFILE

- HackerRank: Solved 900+ algorithm and data structure problems (14,451+ Hackos), strengthening problem-solving, scripting and efficient implementation skills.

EDUCATION

B.E. in Computer Science and Engineering — **Expected Graduation: 2027**

K. Ramakrishnan College of Technology, Tiruchirappalli — CGPA: 7.53/10
