PROFILE SUMMARY

Computer Science and Engineering student specializing in Artificial Intelligence and Machine Learning, with a strong foundation in Java, Python, SQL, Object-Oriented Programming, and Data Structures & Algorithms. Experienced in building AI-driven applications using Generative AI and Retrieval-Augmented Generation (RAG), alongside full-stack and database-driven software development. Applies structured problem-solving and analytical thinking to deliver reliable, scalable software solutions.

TECHNICAL SKILLS

Programming Languages: Java, Python
Database: SQL, MySQL, SQLite
Core Concepts: Object-Oriented Programming (OOP), Data Structures & Algorithms (DSA), DBMS
AI / Machine Learning: Artificial Intelligence, Machine Learning, Generative AI, Retrieval-Augmented Generation (RAG), Prompt Engineering, Computer Vision
Web / Frameworks: Flask, Firebase, HTML, CSS, JavaScript, OpenCV, MediaPipe
Tools & Platforms: Git, GitHub, VS Code

PROJECTS

Voice-Based Medical Information System using RAG | *Python, Flask, RAG, Firebase, HTML, CSS, JavaScript*

- Developed a voice-based medical information web application supporting Tamil-language interaction, enabling users to query health-related information hands-free.
- Implemented Retrieval-Augmented Generation (RAG) to retrieve relevant information from a knowledge source and generate accurate, context-aware responses.
- Built the Flask backend and HTML/CSS/JavaScript frontend, integrating Firebase for data storage and end-to-end system functionality.

ASL Gesture Detection & Text-to-Speech System (Team Project) | *Python, OpenCV, MediaPipe, CNN, Tkinter, pyttsx3*

- Collaborated on a real-time American Sign Language (ASL) gesture recognition system, using OpenCV and MediaPipe for hand-landmark detection and a CNN-based model for gesture classification.
- Contributed to converting recognized gestures into text and integrating Text-to-Speech (pyttsx3) output for accessible, real-time communication.
- Worked with a team to build and test the end-to-end pipeline, combining computer vision, machine learning, and Python application development.

Vehicle Pre-Booking Application | *Python, SQLite, HTML, CSS, JavaScript*

- Developed a vehicle pre-booking application enabling users to browse, select, and reserve vehicles online.
- Designed and optimized database operations using SQLite to manage vehicle, user, and booking data.
- Built a responsive front-end interface using HTML, CSS, and JavaScript to streamline the booking workflow.

EDUCATION

B.E. Computer Science and Engineering (AI & ML) Expected Graduation: 2027
K. Ramakrishnan College of Technology, Tiruchirappalli | CGPA: 7.53

Higher Secondary (XII)
Akkv Aarunadu Matric Hr Sec School, State Board | Percentage: 80%

ACHIEVEMENTS

- Earned 14,451+ Hackos on HackerRank by solving programming challenges in Java and Python, strengthening algorithmic problem-solving skills.
- Developed and deployed a functional website for a real-world business.

CERTIFICATIONS

- ServiceNow Certified System Administrator (CSA)
- ServiceNow Certified Application Developer (CAD)
- Generative AI — Simplilearn
- Advanced Generative AI — Building LLM Applications
