PROFESSIONAL SUMMARY

Computer Science and Engineering (AI & ML) student graduating in 2027, with strong analytical, problem-solving, and data management skills. Proficient in Power BI, MS Office, Google Workspace, SQL, and Python, with hands-on experience in data analysis, dashboard development, and technical project documentation. Demonstrates attention to detail, adaptability, and a willingness to learn new tools and processes. Eager to contribute to reporting, documentation, coordination, and learning deployment activities while collaborating effectively with cross-functional teams.

TECHNICAL SKILLS

Programming: Java, Python, JavaScript
Databases: MySQL, Firebase Firestore
AI / Machine Learning: Machine Learning, scikit-learn, Pandas, NumPy, Retrieval-Augmented Generation (RAG).
Data Analytics: Data Analysis, Power BI
Web / Backend: React, Flask, Fast API, REST APIs, HTML, CSS
Tools: Git, GitHub, VS Code
Productivity: MS Office, Google Workspace
ServiceNow: ServiceNow CSA, ServiceNow CAD (ServiceNow platform knowledge)

PROJECTS

RecoverAI --AI-Powered Revenue Recovery System
Python, scikit-learn, Pandas, NumPy, FastAPI, React, My SQL, REST APIs

- Built a full-stack prototype that predicts how likely revenue is to be recovered from a transaction and suggests the next recovery action, using a React dashboard and a FastAPI backend.
- Developed REST APIs for transaction processing, recovery workflows and analytics.
- Trained a Logistic Regression model on transaction data to predict recovery probability, accuracy, ~83% precision on synthetic data.
- Designed a SQL database layer and an explainable decision engine that turns model predictions into clear recovery recommendations.

Voice-Based Medical Information System (RAG)
Python, Flask, JavaScript, HTML, CSS, REST API, Firebase Firestore

- Built a lightweight RAG pipeline in Python and Flask that retrieves relevant health information using TF-IDF vectorization and cosine similarity, exposed through a REST API.
- Created a responsive HTML/CSS/JavaScript frontend using the Web Speech API for typed and voice queries in English and Tamil.
- Added optional Firebase Firestore integration to log and review user queries.

Vehicle Pre-Booking Application
Python, Flask, SQLite, JavaScript, HTML, CSS, REST APIs

- Developed a full-stack booking application with a Flask backend providing REST-style routes for vehicle availability, booking and CRUD operations, backed by a SQLite database.
- Built the HTML/CSS/JavaScript frontend and connected it to backend routes to manage booking workflows and data updates.

EDUCATION

B.E. Computer Science and Engineering (Artificial Intelligence & Machine Learning)
K. Ramakrishnan College of Technology, Tiruchirappalli | Expected Graduation: 2027 | CGPA: 7.53/10

ACHIEVEMENT

- Solved 900+ programming and algorithmic challenges on Hacker Rank (14,451+ Hackos), building strong logical thinking, problem-solving skills and consistency in data structures and algorithms.

CERTIFICATIONS

- ServiceNow Certified System Administrator (CSA)
- ServiceNow Certified Application Developer (CAD)
- Generative AI — Simplilearn
- Advanced Generative AI — Building LLM Applications
