PROFILE SUMMARY

Final-year Computer Science and Engineering (AI & ML) student with a solid foundation in Java, Python, and SQL, and hands-on experience applying structured problem-solving to real projects. ServiceNow Certified System Administrator (CSA) and Certified Application Developer (CAD), with additional exposure to software and application development. Looking to bring this technical base and a willingness to learn to the IBM Technical Support Representative Intern role.

TECHNICAL SKILLS

- **ServiceNow:** Certified System Administrator (CSA), Certified Application Developer (CAD)
- **Programming Languages:** Java, Python
- **Database:** SQL, DBMS, MySQL, SQLite
- **Core Concepts:** Object-Oriented Programming (OOP), Data Structures & Algorithms (DSA), Software Engineering
- **Tools & Platforms:** Git, GitHub, VS Code
- **Web / Frameworks:** Flask, Firebase, HTML, CSS, JavaScript, OpenCV, MediaPipe
- **AI / Machine Learning:** Artificial Intelligence, Machine Learning, Generative AI, Retrieval-Augmented Generation (RAG), Prompt Engineering, Computer Vision

PROJECTS

Voice-Based Medical Information System using RAG | *Python, Flask, RAG, Firebase, HTML, CSS, JavaScript*

- Built a voice-based web application that lets users ask health-related questions in Tamil and get spoken answers back, aimed at hands-free use.
- Used Retrieval-Augmented Generation (RAG) so the system pulls relevant information from a knowledge source before generating a response, instead of relying on the model alone.
- Built the Flask backend and the HTML/CSS/JavaScript frontend, and connected Firebase for data storage to get the full system working end to end.

ASL Gesture Detection & Text-to-Speech System (Team Project) | *Python, OpenCV, MediaPipe, CNN, Tkinter, pyttsx3*

- Worked as part of a team on a real-time American Sign Language recognition system, using OpenCV and MediaPipe to detect hand landmarks and a CNN model to classify gestures.
- Contributed to converting the recognized gestures into text and adding Text-to-Speech output (pyttsx3) so the system could communicate results out loud.
- Helped test the end-to-end pipeline, combining computer vision, machine learning, and Python application development with the rest of the team.

Vehicle Pre-Booking Application | *Python, SQLite, HTML, CSS, JavaScript*

- Developed an application that lets users browse, select, and reserve vehicles online.
- Designed the SQLite database and the operations behind it to manage vehicle, user, and booking data.
- Built a responsive HTML/CSS/JavaScript front end to make the booking process simple to follow.

EDUCATION

B.E. Computer Science and Engineering (AI & ML) Expected Graduation: 2027
K. Ramakrishnan College of Technology, Tiruchirappalli | CGPA: 7.53

Higher Secondary (XII)
Akkv Aarunadu Matric Hr Sec School, State Board | Percentage: 80%

ACHIEVEMENTS

- Earned 14,451+ Hackos on HackerRank by solving programming challenges in Java and Python, strengthening algorithmic problem-solving skills.
- Developed and deployed a functional website for a real-world business.

CERTIFICATIONS

- ServiceNow Certified System Administrator (CSA)
- ServiceNow Certified Application Developer (CAD)
- Generative AI — Simplilearn
- Advanced Generative AI — Building LLM Applications

RELEVANT COURSEWORK

Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Artificial Intelligence, Machine Learning, Software Engineering
